

gravitypoppe **KIDS** footwear

*Print the page on regular 8 1/2 x 11 paper. Place the paper on the floor. Place your child's feet on the paper one at a time and measure for size. (Make sure that the chart prints at 100%. Do not re-size the chart otherwise it will not work.)

Sizing is approximate, various factors such as brand and foot width can affect fit.

It is not uncommon for one foot to be slightly longer or wider than the other. If this is the case then you should order the size needed for the larger foot. If your child's feet fall in between sizes you should always order the next size up.
